Senior Software Engineer/Java Full Stack Developer (Branch Platform)

Job Description/Responsibilities:

- Design, develop, and implement Java applications.
- Collaborate with product managers and other developers to create software solutions.
- Write clean, efficient, and maintainable code.
- Conduct code reviews and maintain coding standards.
- Debug and resolve technical issues as they arise.
- Participate in the full software development lifecycle, including requirements gathering, analysis, and testing.

Qualification:

- Bachelor's degree in Computer Science or related field.
- Proven experience in Java programming and software development.
- Familiarity with common frameworks and libraries.
- Experience with database management systems (e.g., Oracle, MySQL).
- Knowledge of version control systems, such as Git.
- Strong analytical and problem-solving skills.

Preferred Skills:

- **Proficiency in Java:** A strong grasp of Java programming, including core concepts such as OOP, data structures, and algorithms.
- **Familiarity with Frameworks:** Experience with popular frameworks like Spring and Hibernate to build robust applications.
- **Database Management:** Knowledge of SQL and experience with database systems such as MySQL, PostgreSQL, or Oracle.
- **Version Control Systems:** Proficiency in using tools like Git for code management and collaboration.
- **Problem-Solving Skills:** Strong analytical abilities to troubleshoot and resolve technical issues effectively.
- **Agile Methodologies:** Understanding of Agile development practices and experience working in Agile teams.
- **Web Technologies:** Basic knowledge of front-end technologies (HTML, CSS, JavaScript & Websphere) for full-stack development.

Please note that we will get in touch with shortlisted candidates only.
